Re: Winnebago Reclamation Landfill - FYI

Dear Mr. Schorle:

During the meeting with Warzyn last Friday (12-11-92) you questioned how many feet of fill were required to achieve final elevation at the western end of the landfill. John Lichty informed me that approximately 20 ft of vertical space were available. John estimates that it would take roughly 15-18 months of operation to reach the final elevation. Thus, I believe it would be safe to estimate that it will be nearly two years before a final cover is applied at this end of the landfill. The time frames are a rough estimate. However, we plan to have the landfill surveyed in January of 1993 and should be able to provide a fairly close estimate of the remaining operational life for the entire landfill after the survey is complete.

Sincerely,

Thomas Hilbert
